Educational Equity and the Local Control Funding Formula: Analysis of California's Urban Policy Framework (2024–2026)

The landscape of urban education in California has undergone a fundamental transformation since the 2013 enactment of the Local Control Funding Formula (LCFF), a policy shift that replaced a century-old, rigid categorical funding system with a flexible, equity-based model.[1] As the state enters the mid-2020s, the educational system faces a convergence of fiscal volatility, shifting demographic trends, and an urgent need to refine accountability mechanisms to ensure that targeted resources translate into measurable student success. This report provides an exhaustive analysis of the current urban educational policy environment, evaluating the mechanics of the LCFF, the emerging fiscal pressures of the 2025–2026 budget cycle, and the efficacy of site-level interventions like the Equity Multiplier and the Community Schools model.

The Legislative and Philosophical Foundations of School Finance Reform

---

The genesis of the Local Control Funding Formula can be traced to a widespread consensus among researchers and policymakers that the prior education funding system, defined by its complexity and lack of transparency, was structurally incapable of addressing the needs of disadvantaged students.[1] The previous "categorical" system allocated funds through dozens of specific programs, often with burdensome compliance requirements that stifled local innovation. Legislatively, the shift toward LCFF was solidified through Assembly Bill 97 and Senate Bill 91, which sought to decentralize authority while simultaneously prioritizing resources for economically disadvantaged students, English language learners, and foster youth.[1]

This policy evolution was heavily influenced by seminal research into cost differentials, most notably the work of Helen F. Ladd and Edward Fiske, who argued that providing equal opportunities in diverse urban settings requires unequal, or weighted, resource allocation.[1] The LCFF operates on the principle of a "Weighted Student Formula," which recognizes that the cost of educating a student with language barriers or socioeconomic distress is significantly higher than that of a student without such challenges.[3] By consolidating categorical grants into a single formula, the state aimed to empower local school districts to align spending with their unique student demographics, a process formalized through the Local Control and Accountability Plan (LCAP).[4]

Mechanics of the Local Control Funding Formula

The architecture of the LCFF is built upon three primary pillars: base grants, supplemental grants, and concentration grants. The base grant provides a uniform level of funding per unit of Average Daily Attendance (ADA), with adjustments made for different grade spans to reflect varying instructional costs.[4] Beyond the base, the formula provides a 20% "supplemental" add-on for each unduplicated pupil (low-income, English learner, or foster youth). For districts where these high-need students exceed 55% of total enrollment, an additional "concentration" grant—recently increased to 65% of the base grant—is provided to address the challenges of concentrated poverty.[3]

Table 1: LCFF Funding Components and Targeted Ratios (2024–2026)

Grant Component	Percentage Add-on to Base	Eligibility Criteria	Strategic Objective
Base Grant	100% (Baseline)	All students per ADA	Core instructional and operational costs
Supplemental Grant	20%	Unduplicated pupil count (Low-income, EL, Foster)	Targeted services for high-need students

Concentration Grant	65%	Unduplicated pupils above 55% threshold	Combatting the effects of concentrated poverty
Equity Multiplier	Site-specific rate	Nonstability > 25% and SED > 70%	Site-level stability and achievement gaps
TK Add-on	Grade-specific add-on	Transitional Kindergarten enrollment	Early childhood school readiness

Source: [3]

This tiered structure ensures that the highest-need districts receive significantly more per-pupil funding than their more affluent counterparts. However, the reliance on Average Daily Attendance as the primary unit of measurement has become a point of significant policy friction. While ADA provides a fiscal incentive for schools to ensure students are present, it also creates budget instability for urban districts where chronic absenteeism is more prevalent.[7]

Fiscal Landscape and Budgetary Projections (2025–2026)

The Governor's 2025–2026 Budget Proposal arrives during a period of "caution and vigilance," characterized by revenue volatility and the exhaustion of previous budgetary reserves.[9] Despite these challenges, the budget maintains a commitment to the "California for All Kids" framework, which prioritizes the whole-child approach to education.[11] The Proposition 98 minimum guarantee, which sets the floor for K–14 education funding, is estimated at $118.9 billion for the 2025–2026 fiscal year.[11]

One of the most critical updates in the current cycle is the application of the statutory Cost-of-Living Adjustment (COLA). For 2025–2026, the budget includes a 2.43% funded COLA for the LCFF, translating to approximately $2.5 billion in additional discretionary funds for local educational agencies (LEAs).[9] This adjustment is vital for districts facing the "financial headwinds" of rising staff salaries, health benefits, and operational costs.[9]

Table 2: Comparative Fiscal Outlook for K–12 Education

Metric	2024–2025 (Certified/Estimated)	2025–2026 (Proposed/Projected)
Prop 98 Guarantee	$119.2 Billion	$118.9 Billion
Total TK–12 Funding	$136.2 Billion	$137.1 Billion
Per-Pupil Prop 98 Spending	$17,468	$18,918
Statutory COLA	1.07%	2.43%
Prop 98 Reserve Balance	$1.1 Billion	$1.5 Billion

Source: [9]

A significant maneuver in the 2025–2026 budget is the $1.9 billion deferral of LCFF apportionments from June 2026 to July 2026.[10] While this allows the state to balance the current fiscal year's books, it effectively "shifts expenditures into the future," a strategy the Legislative Analyst's Office (LAO) warns could worsen future deficits if state revenue remains weak.[10] Furthermore, the budget acknowledges the depletion of the Proposition 98 Rainy Day fund, with a mandatory withdrawal of $455 million in 2025–2026 to support LCFF obligations.[10]

The Attendance Crisis: Analyzing the ADA vs. Enrollment Paradigm

---

Perhaps the most significant structural debate in contemporary California school finance is the proposed shift from an ADA-based student count to one based on enrollment. Under current law, districts are funded based on the average number of students attending school each day throughout the year. Post-pandemic, however, attendance rates have plummeted, dropping from a pre-pandemic average of 95.7% to a low of 90.6% in 2021–2022.[7] Although rates are slowly rebounding, they remain about 2 percentage points below 2019 levels,

leading to massive funding losses for urban districts where absenteeism is concentrated.[7]

The LAO estimates that shifting to an enrollment-based methodology would increase annual program costs by over $6 billion.[7] Specifically, using enrollment for the LCFF would increase costs by $5.7 billion, while shifting other ongoing programs like special education would add another $800 million.[7] Proponents of this shift, including many urban district leaders, argue that enrollment-based funding better reflects the fixed costs of running a school, such as teacher salaries and facility maintenance, which do not decrease when a student is absent.[7]

Table 3: Fiscal and Policy Trade-offs of Funding Methodologies

Criteria	ADA-Based (Status Quo)	Enrollment-Based (Proposed)
State Cost	Baseline	+$6 Billion Annually
Equity Impact	Benefits high-attendance/affluent districts	Benefits high-need/urban districts
Fiscal Incentive	Encourages attendance promotion	May reduce incentive for outreach
Budget Planning	Volatile/Hard to predict	Stable/Aligned with staffing
Historical Trend	Attendance improved in late 90s after switch to ADA	Long-term decline in attendance likely

Source: [7]

The trade-offs are stark. While an enrollment-based system would provide more resources to high-need districts (which currently have lower attendance rates on average), the LAO cautions that it would remove the primary fiscal incentive for districts to prioritize attendance.[7] Historically, California's attendance rates improved when the state shifted to its current ADA model in the late 1990s, suggesting that the "fiscal incentive" mechanism is effective.[7] However, the Public Policy Institute of California (PPIC) suggests that the state's current "declining enrollment" trend might offer a window of opportunity: as the total number of students falls, the state could potentially transition to enrollment-based funding

without reducing the absolute funding of any district, leveraging the resulting "fiscal slack" to cover the cost.[14]

Granular Equity: The LCFF Equity Multiplier and Concentrated Need

---

Recognizing that the broad district-level concentration grants often fail to reach the most volatile school sites, California introduced the LCFF Equity Multiplier in the 2023–2024 budget. This site-specific funding mechanism allocates $300 million annually to schools with a prior-year "nonstability" rate greater than 25% and a socioeconomically disadvantaged (SED) rate greater than 70%.[6] This approach addresses the second-order insight that student mobility—or "churn"—is a significant barrier to academic progress that traditional poverty metrics alone may not capture.

Equity Multiplier funds are strictly "supplement, not supplant," meaning they must be used to provide *new* or *enhanced* evidence-based services.[6] For the 2025–2026 cycle, districts are required to document these efforts in their LCAP through specific "focus goals" for every eligible school site.[6] These goals must address student groups performing at the lowest level (Red) on the California School Dashboard and must also investigate "underlying issues in the credentialing, subject matter preparation, and retention" of the school's educators.[6]

Case Study Insight: Stockton Unified and Natomas Unified

In the Stockton Unified School District (SUSD), the 2025–2026 Equity Multiplier plan targets schools like El Dorado Elementary and Jane Frederick High. SUSD's strategy emphasizes Professional Learning Communities (PLCs) and instructional coaching, specifically focusing on English Language Arts (ELA) and Math.[17] Success is measured not just by Smarter Balanced test scores, but by a 10% reduction in chronic absenteeism and a 15% increase in positive responses on annual climate surveys.[17]

Similarly, Natomas Unified has utilized these funds to implement restorative justice training

and hire "Teachers on Special Assignment" (TOSAs) to lead intensive interventions in grades 3 through 8.[18] These roles are tasked with analyzing data from the I-Ready platform to equip classroom teachers with resources for Tier II interventions like Read 180 and Math 180.[18] This illustrates a move toward "data-driven equity," where funding is tethered to specific instructional shifts rather than general operating expenses.

The Whole-Child Paradigm: California Community Schools Partnership Program

---

The most ambitious expansion of the urban educational framework in recent years is the California Community Schools Partnership Program (CCSPP). Launched in 2021 with a historic investment of over $4.1 billion, the CCSPP seeks to transform schools into "villages of support" that integrate academics, health, and social services.[19]

According to a landmark 2025 impact study by the Learning Policy Institute (LPI), the first cohort of CCSPP-funded schools has already shown "consistently positive impacts" across multiple domains in just one full year of implementation.[22] The study found that community schools reduced chronic absence by 30% more than similar matched comparison schools.[20] For Black students, the impact was particularly profound, equating to approximately 130 extra days of learning in math and 151 days in ELA.[20]

Table 4: Student Outcomes in CCSPP Implementation Schools

Metric	Outcome for Grantee Schools	Comparison to Matched Schools
Chronic Absence Rate	30% greater reduction	Strongest gains in elementary sites
Suspension Rate	15% reduction	Largest drop for Black students and secondary sites
Math Performance	+0.06 Standard Deviations	Equivalent to ~43 additional learning days

ELA Performance	+0.05 Standard Deviations	Equivalent to ~36 additional learning days
English Learner Gains	~58-72 days of learning	Significant narrowing of achievement gaps

Source: [20]

The mechanism behind these gains is the "four pillars" of the community school model: integrated student supports, expanded learning time, active family and community engagement, and collaborative leadership.[23] The LPI study noted that the strongest academic improvements occurred in schools that made the most progress in reducing chronic absence, suggesting a causal pathway where improved attendance, driven by "whole-child" strategies, unlocks the benefits of instruction.[22] Schools like Wheatland Union High have seen graduation rates jump from 78.6% to 100% in a single year after implementing CCSPP-funded career technical education pathways and restorative practices.[24]

Early Childhood and Literacy Initiatives

As part of the "California for All Kids" framework, the 2025–2026 budget achieves a critical milestone: full implementation of Universal Transitional Kindergarten (TK).[11] This policy allows all children who turn four years old by September 1 to enroll in a public preschool program, adding approximately 60,000 students to the system.[10] The state has committed $2.4 billion for this expansion, along with $1.5 billion to reduce student-to-adult ratios from 12:1 to 10:1.[10]

Beyond access, the budget focuses on the quality of early instruction. It allocates $40 million for literacy screening to identify reading difficulties like dyslexia in K–2 students and $500 million for a "Literacy and Mathematics Coaches" program aimed at hiring specialists for high-poverty schools.[11] This reflects a third-order insight: early intervention is the most cost-effective way to prevent the achievement gaps that necessitate expensive remediations in later grades. By lowering the eligibility threshold for universal access to

LEAs with an unduplicated pupil percentage (UPP) of 55% (down from 75%), the state is effectively broadening the "equity net" for expanded learning opportunities.[10]

Disciplinary Paradigms: Restorative Justice vs. Informal Exclusion

---

Urban education policy has shifted dramatically away from "zero-tolerance" punitive measures toward Restorative Justice (RJ). RJ practices focus on repairing harm through dialogue and mediation, rather than suspension or expulsion.[25] Evaluations in districts like the San Mateo-Foster City School District show that RJ has reduced middle school disciplinary incidents across fighting, intimidation, and drug-related categories.[27] Students reported a "remarkable increase" in school connectedness, with 70% of middle schoolers feeling close to people at their school compared to 53% previously.[27]

However, a 2025 Stanford study raises a critical warning about "informal exclusionary discipline practices".[28] When state mandates to reduce formal suspensions are not paired with adequate resources (staffing, mental health support, and space), teachers may resort to "sending a student into the hallway unsupervised or home from school early".[28] These undocumented exclusions are often more harmful because they are not tracked, meaning marginalized students, Black, Latino, and foster youth, may be missing significant learning time without any procedural oversight.[28]

Discipline Practice	Intent	Potential Unintended Consequence
Restorative Circles	Build community and repair harm	Lack of staff time/investment can undermine intent
Suspension Bans	Keep students in class/learning	May trigger informal "hallway" exclusions
Peace Rooms	Provide de-escalation/wellness	Can become "exclusionary" if overused
Social-Emotional Learning	Teach self-regulation skills	Can be perceived as "soft" or "lax" without structure

Source: [25]

The "success" of restorative justice is therefore highly contingent on institutional capacity. Research from 2024–2025 suggests that RJ reduces suspension rates effectively in schools with a "whole-school restructuring" approach, but it can fail in environments where it is merely a "packaged" framework without genuine staff buy-in.[25]

Critical Evaluation of Performance-Based Funding (PBF)

While the LCFF is an input-based weighted formula, there is a recurring interest in Performance-Based Funding (PBF), linking state appropriations to student outcomes like graduation or test score growth.[30] Proponents argue that PBF creates an incentive for efficiency and rewards schools that succeed with at-risk populations.[30]

A systematic review of 36 articles on PBF in higher education, however, found that such policies are generally "not effective" in improving completion or equity.[32] Unintended consequences include "restricted access" for underserved students, as institutions become more selective to boost their performance metrics.[31] In K–12 education, PBF could bake in existing inequities; already under-resourced schools serving high-poverty urban areas might receive *even fewer* resources if they fail to meet standardized benchmarks.[31] Critics argue that the state should prioritize "fair school funding," sufficient baseline levels and progressive distribution, rather than "inputs vs. outputs" maneuvers that may penalize the most vulnerable.[34]

Demographic Transitions and the "Fiscal Slack" Opportunity

California's K–12 system is entering a period of "downsizing and adjustment".[8] Enrollment is projected to fall below 5.2 million by 2032, with the federal government projecting even steeper declines toward 5 million.[8] Greater Los Angeles alone has seen a 15% decline in the past decade, with another 19% drop forecast.[8] While this forces districts to make difficult

decisions regarding school closures and staffing, it also creates a unique fiscal dynamic under Proposition 98.

Because the total funding guarantee is tethered to the state's GDP and General Fund rather than just enrollment, a smaller base of students results in higher per-pupil funding.[8] The PPIC estimates that if per-student funding grows at the same rate as overall education revenues, the state could leverage an additional $7.5 billion.[14] This "fiscal slack" is the key to the political feasibility of future LCFF reforms. It allows the state to implement changes like enrollment-based funding or regional cost adjustments (which cost billions) without the political "losers" that typically accompany a zero-sum redistribution of funds.[14]

Table 5: Proposed LCFF Modifications and Estimated Costs

Proposed Reform	Estimated State Cost	Primary Objective
Enrollment-Based Funding	$3.8 - $6.0 Billion	Stabilization for chronic absenteeism losses
Regional Cost Adjustment	$2.5 Billion	Accounting for competitive teacher wages [14]
Dual-Need Funding	$1.7 Billion	Targeted funds for students with multiple needs
Smoothing Cutoffs	$1.5 Billion	Eliminating the 55% "concentration cliff" [14]

Source: [7]

Stakeholder Influence and Policy Adoption Dynamics

The political feasibility of urban policy alternatives in California is dictated by the interaction of major stakeholders. School districts, represented by bodies like the California School Boards Association (CSBA), prioritize "discretionary funding" and "flexibility" to address their unique populations.[9] They are often wary of "categorical-like" restrictions being re-introduced through initiatives like the Equity Multiplier.[9]

Teachers and educators advocate for "adequate resources" and "supportive working conditions," with organizations like the CTA pushing for smaller class sizes and mental health services.[1] Meanwhile, parent and community organizations, such as the Education Trust-West, focus on "transparency" and "accountability," arguing that concentration funds must directly benefit the high-need students who generated them.[43] Research indicates that concentration districts (those receiving the largest shares of equity funding) often "target less" at the school site level, spreading dollars equally across all schools rather than focusing on the highest-need sites.[44] This "targeting gap" remains a primary point of contention in the LCAP reform debate.

Synthesis and Strategic Recommendations

The analysis of California's urban education policy for the 2024–2026 cycle reveals a system that is functionally progressive but mechanically strained. The LCFF has successfully directed billions of dollars toward high-need populations, but post-pandemic attendance shifts and looming enrollment declines necessitate a strategic pivot. To strengthen the equity framework and improve urban educational outcomes, the following recommendations are proposed:

1. **Modernize the Student Count Methodology**: The state should transition from ADA-based to enrollment-based funding. Using the "fiscal slack" of approximately $7.5 billion created by declining enrollment, the state can fund the estimated $6 billion cost of this switch without reducing funding for high-attendance districts.[7] This would provide fiscal stability for urban centers where chronic absenteeism currently penalizes school budgets.
2. **Refine the Equity Formula for "Dual Needs"**: The LCFF should be amended to provide additional funding for students who fall into multiple targeted categories (e.g., a student who is both an English learner and low-income). This "duplicated targeted funding" would direct an estimated $1.7 billion toward the districts serving the most vulnerable, multi-burdened populations.[14]
3. **Institutionalize the Community School Model**: Given the 30% reduction in chronic absenteeism and significant learning gains for Black students in CCSPP schools, the

state should transition these implementation grants into ongoing, formulaic funding.[20] This ensures that the "whole-child" supports are not lost once one-time grants expire.

4. **Strengthen Site-Level Workforce Stability**: The Equity Multiplier's focus on teacher retention and credentialing should be expanded.[6] The state should incentivize "Educator Diversity and Retention" grants specifically for Equity Multiplier sites, recognizing that instructional quality is the primary driver of the equity gains seen in math and ELA.[6]
5. **Enforce Reciprocal Accountability**: LCAPs should be reformed from "bureaucratic compliance" documents into "community engagement platforms".[45] This includes creating "trigger laws" that enforce state fiscal obligations to districts and requiring districts to provide clearer, school-level spending data to ensure that supplemental funds are reaching the students for whom they were intended.[44]

California's LCFF remains a national model for equitable school finance, but its next decade requires a more nuanced, site-specific focus. By addressing the attendance crisis, targeting dual-need students, and stabilizing the urban educator workforce, the state can ensure that its historic investments result in the "acceleration" of learning for all students, regardless of their zip code or socioeconomic background.
